Verra currently manages global standards frameworks designed to drive finance towards high-impact activities that measurably and verifiably mitigate climate change and promote sustainable development. Verra's standards programs include the Verified Carbon Standard (VCS) Program and the associated Jurisdictional and Nested REDD+ framework (JNR), the Verra California Offset Project Registry (OPR), the Climate, Community & Biodiversity (CCB) Standards, and the Sustainable Development Verified Impact Standard (SD VISta).

Verra is also developing new standards frameworks, including the Landscape Standard, which is being developed with a range of partners and will promote and measure sustainability outcomes across agricultural landscapes, and the Reduce, Recycle and Recover (3R) Crediting Mechanism, which aims to increase the value of waste plastic and direct resources to new and scaled-up plastic collection and recycling activities.

To effectively identify, develop, manage and promote the various standards frameworks Verra operates, the organization operates in four main functional teams, as outlined in the diagram below.

VERRA

Standards Development Team	Program Team	Communications and Market Development Team	Finance/Accounting Team
• Identifies new market-based standards frameworks that can catalyze measurable environmental and social impact; • Develops new standards frameworks relying on transparent and multi-stakeholder engagement.	• Manages and administers Verra's standard programs; • Provides guidance and support to all stakeholders using the programs and oversees the technical evolution of the programs.	• Ensures that information about Verra's work is disseminated strategically and effectively; • Analyzes market opportunities for the full range of Verra standards.	• Supports all other teams in their efforts by managing the organization's finances and providing a full suite of HR and IT services.

Verra is currently searching for highly motivated and qualified individuals to join the Program, Standards Development, and Communications and Market Development Teams.
